BARTŁOMIEJ HAJKIEWICZ

PORTFOLIO

BIOGRAPHY & ARTIST STATEMENT

Bartłomiej Hajkiewicz - music composer, sound designer, sound researcher, cognitive scientist. Graduate of the Feliks Nowowiejski Secondary Music School in Szczecin; studied at the Instrumental Faculty of the Stanisław Moniuszko Academy of Music in Gdańsk; graduate of the Institute of Jazz and Contemporary Music at the State Academy of Applied Sciences; graduate of the Institute of Cognitive Science and Philosophy at the University of Szczecin. In his artistic practice, he combines contemporary music with forms such as XR experiences, audio VR, interactive soundscapes, audio installations, theater, film. In his research, he focuses on sound within the mechanisms in the development of temporal information processing abilities and cognitive sequencing in time perception. His interests include phenomenology, neuroaesthetics, acoustic ecology, and the shaping of experiences through sound. He has participated in numerous Polish and international festivals and symposia, his works have been presented, among others, at Immersive Tech Week in Rotterdam, Biennale College Cinema VR in Venice, Clones Film Festival in Ireland, the ART VR Conference at the DOX Centre for Contemporary Art in Prague, Verzió International Film Festival in Budapest, the National Museum in Szczecin, Szczecin Philharmonic, Szczecin Shipyard Cultural Centre, the “Młode Wilki” Young Wolves Festival organized by the Academy of Art in Szczecin, Kongres Kultura Wolności, Bałtycki Port Kultury, Senior Movie International Film Festival, O!PLA Animation Festival, Up To Date Festival in Białystok, Galeria XXI in Warsaw, OFF M Gallery in Szczecin, STAR Gallery in Szczecin, and Kückenmühle Gallery. In 2025, he became a fellow of the Presidential Creative Scholarship of the City of Szczecin.

At the center of my practice is sound as a corporeal, temporal, and relational phenomenon. I am interested in its capacity to constitute experience. I work with sound in an experimental and research-oriented manner, treating it as a medium for the reorganization of perception, the intensification of corporeal experience, and the reconstruction of subjectivity. I am drawn to moments when sound transforms perception, sensitizes the body, interprets time, and becomes a tool for self-discovery. I treat sound installations as situations in which the boundary between listening and being, between the recipient and the space, between perception and corporeality is abolished. I compose and produce acousmatic music for various audiovisual forms. I utilize acoustic and electronic instruments, as well as modular, analog, digital, and software synthesizers. I create resonance apparatuses and utilize them as elements of audio installations and interdisciplinary exhibitions. I build interactive audial environments in which sound regains its agency and the ability to organize social and dramaturgical space. It is sound that organizes the architecture of attention, activates the gesture, guides the body, establishes the logic of the event, and becomes a space of ritual, in which the audible, the corporeal, and the present combine into an experience that is simultaneously sensory, philosophical and social.

SELECTED WORKS

- COMMISSIONED COMPOSER, WORLD PREMIERE OF AN ORIGINAL STRING QUARTET PERFORMED BY BALTIC NEOPOLIS ORCHESTRA , MUZYCZNE GENERACJE, BAŁTYCKI PORT KULTURY, 2026
- CREATOR OF A SITE-SPECIFIC ELECTROACOUSTIC INSTALLATION AND ACOUSMATIC COMPOSITION CREATED FOR “SZCZECIŃSKA REPUBLIKA WOLNOŚCI” (SZCZECIN FREEDOM REPUBLIC), PRESENTED IN THE INDUSTRIAL SPACE OF THE FORMER SZCZECIN SHIPYARD – SZCZECIN SHIPYARD'S SOLIDARNOŚĆ CULTURAL CENTRE, 2026
- CREATOR OF “CZUJE DOBRE DŹWIĘKI”, A SITE-SPECIFIC PROGRAMME PRESENTED AS PART OF THE “I HEAR GOOD SOUNDS / SŁYSZĘ DOBRE DŹWIĘKI FESTIVAL 2026” AT THE SZCZECIN PHILHARMONIC, COMPRISING AN INTERACTIVE ELECTROACOUSTIC INSTALLATION AND THE DEEP LISTENING SESSIONS SOUND EXPERIENCE – SZCZECIN PHILHARMONIC, 2026
- INVITED COMPOSER AND CREATOR FOR THE CLOSING CEREMONY OF THE 2026 YOUNG WOLVES FESTIVAL (ACADEMY OF ART IN SZCZECIN), PRESENTING THE WORLD PREMIERE OF A CONTEMPORARY MUSIC COMPOSITION AT THE HISTORIC SZCZECIN SHIPYARD'S SOLIDARNOŚĆ CULTURAL CENTRE, 2026
- MUSIC COMPOSER, CREATOR OF THE SOUND INSTALLATION "PRELUDIUM" – CONCERTO FOR STRING ORCHESTRA, ELECTRONICS, AND THE CUSTOM SONORISTIC APPARATUS “SONAR PRESENCE” – CULTURE OF FREEDOM– BAŁTYCKI PORT KULTURY, 2026
- CREATOR OF THE INTERACTIVE SOUND INSTALLATION "SONAR PRESENCE" – PROJECT REALIZED AS PART OF THE PRESIDENTIAL CREATIVE SCHOLARSHIP OF THE CITY OF SZCZECIN 2025 – OFF M GALLERY, 2025
- CREATOR OF AUDITORY MINDFULNESS CARDS "KARTY MIKROPRAKTYK: KONTEMPLOWANIE CUDÓW STWORZENIA" – LAS SZTUKI FOUNDATION – TWORZĘ SIĘ GALLERY, 13 MUZ CULTURAL CENTER, 2025
- CREATOR OF THE SOLO SOUND EXHIBITION "TILT IN A STATE OF ALTERED CLOSENESS / PRZECHYŁ W STANIE ZMIENIONEJ BLISKOŚCI" – MUSIC COMPOSITION AND SOUND INSTALLATION – CENTRUM.SZCZECIN CREATIVE FACILITY JADWIGA, 2025
- CREATOR OF THE SOLO SOUND EXHIBITION RECONSTRUCTION OF THE COAST / REKONSTRUKCJA WYBRZEŻA – SOUND INSTALLATION AND CONCERT OF COMPOSITIONS – KÜCKENMÜHLE GALLERY – SZCZECIN, 2025
- SOUND POST-PRODUCTION – *7 UJEĆ /7 SHOTS* (FEATURE FILM) – DIR. JAKUB ROMANOWSKI – PROD. WARSAW FILM SCHOOL, 2025
- CREATOR OF SOUND INSTALLATIONS, CREATOR OF A RADIO REPORTAGE FEATURE – "PROWIZORIUM" – NATIONAL MUSEUM IN SZCZECIN, 2025
- CREATOR OF THE SOLO SOUND EXHIBITION – "NIBELUNGEN" – STAR GALLERY – SZCZECIN, 2025
- COMPOSER, SOUND DIRECTOR – "RICHARD III" (DOCUMENTARY FILM) – DIR. KRZYSZTOF KUŹNICKI – PROD. KAMERA ASSOCIATION – THE WEST POMERANIAN FILM FUND, 2025
- CURATOR OF THE SOUND EXHIBITION SERIES – "IMAGE-SOUND-MAKING / OBRAZO-DŹWIĘKO-ROBIENIE" – NATIONAL CENTRE FOR CULTURE, BARDZO MŁODA KULTURA 2023-2025 GRANT PROGRAM
- COMPOSER, MUSIC PRODUCER, SOUND DESIGNER, SOUND DIRECTOR – "THE CIRCLE XR" (XR FILM) – DIR. MICHAŁ STANKIEWICZ – PROD. BETWIX FOUNDATION – WARSAW, 2024
- COMPOSER, MUSIC PRODUCER, SOUND DESIGNER – "MENHARD" (DOCUMENTARY FILM) – DIR. JAKUB ROMANOWSKI – PROD. KAMERA ASSOCIATION – SZCZECIN, 2024
- COMPOSER, MUSIC PRODUCER, SOUND DESIGNER – "HWDP" (FEATURE FILM) – DIR. OLIWER PIOTR DULIŃSKI – PROD. LODZ FILM SCHOOL – WARSAW, 2024
- COMPOSER, MUSIC PRODUCER, SOUND DIRECTOR, SCREENWRITER – "FLUTTER" (MUSICAL) – DIR. JOANNA CHUŁEK – PROD. DOBRY KLIMAT DLA SZTUKI FOUNDATION – WARSAW, 2024
- COMPOSER, MUSIC PRODUCER – "WHEN I AM NOT HERE / KIEDY MNIE NIE MA" (THEATRICAL PERFORMANCE) – DIR. ANNA KOLANOWSKA – PROD. DOBRY KLIMAT DLA SZTUKI FOUNDATION, CULTURAL CENTER IN PIASECZNO – WARSAW, 2024
- CREATOR OF THE ART RESIDENCY – "ZEKTOR_02 ŻARNOWO AUDIO ART RESIDENCY" – KONIK STUDIO – ŻARNOWO, 2024
- EXHIBITION CREATOR, CREATOR OF SOUND INSTALLATIONS – "TIMELINE KONIK STUDIO" – NATIONAL MUSEUM IN SZCZECIN – SZCZECIN, 2023
- COMPOSER, MUSIC PRODUCER – COMMISSIONED MUSICAL COMPOSITION FOR THE 6TH SENIOR MOVIE INTERNATIONAL FILM FESTIVAL – SZCZECIN, 2023
- SOUND DESIGNER, SOUND DIRECTOR – "THE BEAR" (ANIMATED FILM) – DIR. PAWEŁ KLESZCZEWSKI, KATARZYNA ZIMNOCH – PROD. KONIK FILM STUDIO – SZCZECIN, 2023
- SOUND DESIGNER, SOUND DIRECTOR – "STONES" (ANIMATED FILM) – DIR. PAWEŁ KLESZCZEWSKI, KATARZYNA ZIMNOCH – PROD. KONIK FILM STUDIO – SZCZECIN, 2023
- SOUND DESIGNER, SOUND DIRECTOR – "THE STORK" (ANIMATED FILM) – DIR. PAWEŁ KLESZCZEWSKI, KATARZYNA ZIMNOCH – PROD. KONIK FILM STUDIO – SZCZECIN, 2023
- CREATOR OF THE ART RESIDENCY – "ZEKTOR_01 ŻARNOWO AUDIO ART RESIDENCY" – KONIK STUDIO – ŻARNOWO, 2023
- COMPOSER, MUSIC PRODUCER, SOUND DIRECTOR – "THE WITNESS / ŚWIADEK" (THEATRICAL PERFORMANCE) – DIR. ARKADIUSZ BUSZKO – PROD. UNDERGROUND THEATRICAL STAGE, KAMERA ASSOCIATION – SZCZECIN, 2022
- SOUND DESIGNER, SOUND DIRECTOR – "MARIAN" (DOCUMENTARY FILM) – DIR. GRZEGORZ FEDOROWSKI – PROD. WEST POMERANIAN FILM FUND POMERANIA FILM – SZCZECIN, 2022
- SOUND DESIGNER, SOUND DIRECTOR – "MUSHROOMS" (ANIMATED FILM) – DIR. PAWEŁ KLESZCZEWSKI, KATARZYNA ZIMNOCH – PROD. KONIK FILM STUDIO – SZCZECIN, 2022
- SOUND DESIGNER, SOUND DIRECTOR – "EARS OF GRAIN" (ANIMATED FILM) – DIR. PAWEŁ KLESZCZEWSKI, KATARZYNA ZIMNOCH – PROD. KONIK FILM STUDIO – SZCZECIN, 2022
- COMPOSER, SOUND DESIGNER – "WISH YOU WERE HERE" (VR FILM) – DIR. MICHAŁ STANKIEWICZ – PROD. LODZ FILM SCHOOL, VISUAL NARRATIVES LABORATORY – WARSAW, 2021
- CREATOR AND DIRECTOR OF THE MUSIC EDUCATION PROGRAM – "MAKING MUSIC / ROBIMY MUZĘ – CAPITAL CITY CENTER FOR CULTURAL EDUCATION, CAMERATA VARSOVIA FOUNDATION – WARSAW, 2017-2020
- COMPOSER, SOUND DESIGNER, SOUND DIRECTOR – "JAWIĆ SIĘ / APPEARING" (THEATRICAL PERFORMANCE) – DIR. MICHAŁ STANKIEWICZ, BARTŁOMIEJ HAJKIEWICZ – PROD. UNIVERSITY OF BIALYSTOK – UNIVERSITY CULTURAL CENTER – BIALYSTOK, 2019

STRING QUARTET (2026)

COMMISSIONED COMPOSITON, WORLD PREMIERE OF AN ORIGINAL STRING QUARTET
PERFORMED BY BALTIC NEOPOLIS ORCHESTRA BALTIC CULTURAL CENTRE

***STRING QUARTET* 9'43"**
World premiere performance recording

The String Quartet is a single-movement, multi sectional fantasy developed from a sustained reflection on resonance and its role in shaping musical experience. The work extends my previous artistic practice with sound installations conceived in relation to specific architectural and spatial environments. It translates questions arising from that practice into the medium of the string quartet, exploring how timbre, resonance, texture and the unfolding of musical time can evoke a succession of distinct sonic environments.

The composition can be approached as a sequence of soundscapes: imagined or remembered places shaped by my own experience of listening, inhabiting space and working with resonant materials. Rather than presenting a single, continuous musical landscape, its multi-sectional form moves through contrasting sonic situations, each establishing its own character and perceptual perspective. The quartet thus brings aspects of my spatial sound practice into an instrumental context, treating the ensemble as a medium for exploring resonance, the changing qualities of sound and the experience of moving between sonic environments.

Commissioned for the Miastotwórcy programme by Baltic Neopolis Orchestra, the work received its world premiere on 4 October 2026, performed by Baltic Neopolis Quartet at Bałtycki Port Kultury in Szczecin. The programme positioned contemporary composition within a broader reflection on Szczecin's musical heritage, bringing together different generations of composers associated with the city.

SŁYSZĘ DOBRE DŹWIĘKI / I HEAR GOOD SOUNDS

SZCZECIN PHILHARMONIC

“FEEL GOOD SOUNDS / CZUJE DOBRE DŹWIĘKI”, A SITE-SPECIFIC PROGRAMME PRESENTED AS PART OF THE “I HEAR GOOD SOUNDS / SŁYSZĘ DOBRE DŹWIĘKI FESTIVAL” AT THE SZCZECIN PHILHARMONIC, FEATURING AN INTERACTIVE ELECTROACOUSTIC INSTALLATION AND THE DEEP LISTENING SESSIONS SOUND EXPERIENCE.

CONCEPT

The projects were developed for the I Hear Good Sounds Festival at the Szczecin Philharmonic, an interdisciplinary programme dedicated to hearing awareness, acoustic ecology, and listening culture. Recognising high-quality acoustic environments as a fundamental condition for both musical experience and everyday well-being, the festival promotes hearing health and advocates for improved acoustic conditions within the Philharmonic as well as in schools, public institutions, and urban spaces. Through public programmes, educational activities, and interdisciplinary events, the festival examines environmental noise, highlights good practices in architectural acoustics, and encourages broader awareness of listening as a cultural, social, and environmental practice. The 2026 edition, developed under the theme Hear Yourself, focused on mindfulness, mental well-being, and the relationship between sound, the body, and emotional experience.

DEEP LISTENING SESSIONS: A MINDFULNESS-BASED LISTENING EXPERIENCE

Presented at the I Hear Good Sounds Festival at the Szczecin Philharmonic, Deep Listening Sessions is a guided listening work exploring attentive listening as a conscious mode of auditory perception. Participants experienced a site-specific sound composition while resting in a comfortable position within a carefully designed acoustic environment. The work combined electronic composition, field recordings, spoken narration, and mindfulness-based listening practices, guiding attention towards subtle acoustic events, breathing, bodily sensations, and the evolving temporal structure of the soundscape.
The sonic material consisted of original electroacoustic compositions and environmental recordings diffused through resonant surfaces distributed throughout the space. By extending sound beyond conventional loudspeaker reproduction, the work encouraged an immersive mode of listening and offered a temporary suspension from the continuous sensory demands of everyday life, creating conditions for focused attention, reflection, and perceptual awareness

INTERACTIVE SOUND INSTALLATION: TOUCHING SOUND

The space contains two interactive electroacoustic objects based on an electrical circuit activated through touch. Each object consists of multiple metal spheres distributed across different areas of the space. Sound events are triggered by simultaneously touching two spheres, thereby closing an electrical circuit. Some of the configurations are designed so that the distance between the spheres exceeds the reach of a single person. In these cases, the cooperation of at least two participants is required: holding hands, they jointly close the circuit and initiate a sound event.

This action encourages co-presence, creating a situation of intimate performance in which a relationship between participants may become a condition for the emergence of sound. Each triggering is accompanied by a subtle resonance; vibrations transmitted through the metal spheres to the participants' bodies deepen the experience and integrate auditory perception with tactile sensation.

REPUBLIKA WOLNOŚCI / REPUBLIC OF FREEDOM

SZCZECIN BEYOND DIVISIONS. WE ARE THE WAVE.

The Republic of Freedom project is based on the idea that culture can help rebuild social connections through shared activity. It created a space for residents, artists from different generations and backgrounds, and people who rarely take part in the city's cultural life.

The phrases "Szczecin Beyond Divisions" and "We Are the Wave" referred to the city as a community whose strength comes from its diversity. A wave is formed by thousands of individual movements. Culture develops in a similar way, through the participation and cooperation of many people. Graffiti, painting, photography, music, and performance became different forms of expression through which contemporary Szczecin was presented. The former Shipyard Common Room served as a meeting place between the history of the shipyard and the present. The works created on its walls referred to the history of the site while also showing how this heritage can inspire new creative activity and engage younger generations. The project brought together artists with different experiences, aesthetics, and generational backgrounds. Alongside established artists, young creators took part in the project, gaining an opportunity for dialogue, learning, and participation in the creation of public space. The wall became a place for the exchange of ideas and experiences.

As part of the project, I created an electroacoustic installation and a musical composition, "Fala" (The Wave), for the post-industrial spaces of the Szczecin Shipyard. The composition was realized through resonant elements of the existing industrial infrastructure. I attached vibration transducers to various metal structures, including ventilation shafts and other steel structural elements, using their surfaces as sound-radiating bodies. The resulting sounds formed a multichannel electroacoustic composition integrated into the architecture of the former shipyard workshop. I also used horn loudspeakers similar to those originally used at the Szczecin Shipyard, incorporating elements of the site's original sound infrastructure into the installation.

MŁODE WILKI / YOUNG WOLVES

ACADEMY OF ART IN SZCZECIN

INVITED COMPOSER FOR THE CLOSING CEREMONY OF THE 2026 YOUNG WOLVES FESTIVAL IN ACADEMY OF ART IN SZCZECIN, PRESENTING THE WORLD PREMIERE OF A CONTEMPORARY MUSIC COMPOSITION AT THE HISTORIC SZCZECIN SHIPYARD'S SOLIDARNOŚĆ CULTURAL CENTRE.

The „Młode Wilki / Young Wolves” Festival has been organized since 2014 by the Academy of Art in Szczecin. It is one of the most important reviews of young art in Poland, and is organized via open-call. From among the submitted projects, the Jury selects individuals or collectives (studying at art departments in Poland) to present their works in a group exhibition as part of the Festival.

The authors of the awarded projects come to Szczecin and participate in the festival events. Thanks to this, „Młode Wilki”, in addition to the competition part, is primarily a meeting place for the youngest generation of artists, a place for the exchange of knowledge and experience between students practicing contemporary art and invited guests. It is a platform where relevant contemporary artistic and socio-political issues are addressed and subjected to constructive reflection and criticism in a real meeting of different people.

The Festival’s name refers to the 1995 cult film „Young Wolves” by Jaroslaw Zamojda), set in Szczecin.

As an invited guest of the 2026 edition of the Young Wolves Festival, organised by the Academy of Art in Szczecin, I presented premiere of a newly commissioned contemporary music composition during the festival's closing ceremony. The performance took place at the historic Solidarność Centre in the Szczecin Shipyard, a site of exceptional cultural and historical significance. Conceived specifically for the occasion, the work formed part of the festival's concluding programme, bringing together participating artists, invited guests, representatives of cultural institutions, and the public. The premiere contributed a sonic dimension to the closing event, responding to both the architectural character of the venue and the broader context of one of Poland's leading platforms for emerging contemporary art.

SONAR
PRESENCE

SONAR PRESENCE

INTERACTIVE ELECTROACOUSTIC INSTALLATION , PROJECT REALIZED AS PART OF THE PRESIDENTIAL CREATIVE SCHOLARSHIP OF THE CITY OF SZCZECIN 2025

Sonar Presence is an original project of an interactive sound installation addressing the issue of resonance as a pre-reflective form of embodied cognition. The work is an experiment in the field of sound art and audio-VR; it explores the structure of presence, the nature of perception, and the relationship between humans and their environment. The project constitutes a gesture of the emancipation of sound against visual primacy; it invites the viewer to become a listener and a body receiving vibrations, a presence immersed in sound. Sonar Presence is an interactive sound installation consisting of elements of a custom-designed resonance apparatus. The installation forms a closed stage within which the viewer becomes an active participant in an audiovisual experience. The work explores the issues of consciousness, the structure of perception, and the interaction between the subject and the surrounding sound world. The stage of sonic objects of Sonar Presence is a project investigating the complexity of the question "What is it like to be present?". Through the medium of sound, resonance, interaction, and motion technology, the project creates a space in which the viewer becomes both subject and object simultaneously. The installation utilizes viewer position analysis technology, enabling interactive modulation of sounds relative to the participant's movement and activity. The project is an experiment in the field of sound art and audio-VR; it explores the structure of presence, the nature of perception, and the relationship between humans and their environment.

CONCEPT

Sound penetrates boundaries, does not ask for permission, and cannot be easily isolated and stopped like an image. It is a temporal and immersive phenomenon. The Sonar Presence installation constitutes a gesture of the emancipation of sound against visual primacy; it invites the viewer to become a listener and a body receiving vibrations, a presence immersed in sound. Through seemingly dead steel objects, animated by acoustic movement, the project reclaims space for sensory experience. It is a space for an intimate encounter with oneself and with others in a world where silence, murmur, and resonance can be more significant than an image. The central element of the installation is a stage of sonic objects named Sonar Presence. This term not coincidentally refers to both physical presence and sound localization technology, indicating the dual nature of this experience. The neologism pre-sense hidden in the title refers to the idea of resonance as a pre-reflective form of embodied cognition. On the one hand, the sonic space can be experienced as a place of focus, deep reflection, and meditative immersion; the recipient can absorb the vibrations and subtle changes in the soundscape, listening to the spectacle or audial poem from a distance. On the other hand, the viewer can become an active co-creator of the dramaturgy by intentionally resonating with the objects, initiating changes in the stage, and generating new events in the soundscape. This stage can be read as a theater in which sound and its material sources become actors, the causative agents of the dramaturgy. The recipient is called to presence.

Steel resonators, vibration transducers, capacitive manipulators, contact microphones, touch sensors, and Doppler echolocation sonars are dramaturgical artifacts guiding the participant through a network of possible gestures, reactions, and consonances. In this context, Sonar Presence refers to the philosophy of presence as understood by Hans Ulrich Gumbrecht, who contrasts the "productivity of meaning" with the experience of awareness, the presence of something here and now, fully corporeal and affective. The installation does not so much "communicate" or "represent" as it happens. In a world of ocularcentric dominance of the image, Sonar Presence constitutes an emancipatory gesture of sound; it creates an environment in which sound regains its agency and the ability to organize social and dramaturgical space. It is sound that organizes the architecture of attention, activates the gesture, guides the body, and establishes the logic of the event. Sonar Presence is a space of sound ritual, in which the audible, the corporeal, and the present combine into an experience that is simultaneously sensory, philosophical, and social.

TECHNOLOGY

Sound objects composed of large-format metal panels, vibration transducers, Doppler echolocation sonars, contact microphones, and touch sensors create a stage in which the viewer is situated in the center. Due to transducers that induce vibrations, the panels become resonators emitting complex musical structures in response to the viewer's actions. Contact and capacitive microphones enable interaction through touch, strikes, or voice. The installation utilizes a custom-designed system for analyzing viewer activity, which allows for the dynamic adjustment of sound depending on the participant's position and actions. The whole creates a sonoristic environment that engages the senses and provokes reflection on the nature of perception and the sense of presence. The project constitutes an innovative approach to the use of audio technology, proposing interactive resonators that react to the viewer's actions instead of traditional speakers. The integration of position sensors and touch interfaces allows for the dynamic adjustment of sound properties. The installation pushes the boundaries of traditional immersive projects, introducing new possibilities for interaction and exploration of the sonic space. The installation raises questions about the nature of presence and perception in the context of human interaction with technology. In the spirit of Edmund Husserl's phenomenology, the project investigates how sound constitutes the sense of the present, how it inscribes itself into the structure of consciousness, and how, through corporeality and interaction, it creates the experience of presence. The project draws inspiration from the traditions of experimental and installation music, from acoustic craftsmanship, the construction of bells, gongs, instruments from the electrophone group, and automatons. The installation is a proposed answer to the question: how can a spiritual, contemplative, non-sacred space sound today?

THE SIGNIFICANCE OF THE SONAR PRESENCE EXPERIENCE

The installation creates an experiential situation in which sound, body, and time are constituted in a single act of duration. The significance of this type of experience is multidimensional, ontological, epistemic, affective, and cultural. The work demonstrates that the boundary between the external and the internal is not fixed; it is dynamic, newly established through the wave of resonance. The body receives sound, becomes its medium, the space in which its meaning arises. This kind of experience shifts the center of gravity from representation to presence, from interpretation to affective consonance. This is of significant importance for research on embodied cognition, as it confirms that cognition does not have to be conceptual to be profound. In times of acceleration and the fragmentation of perception, the proposed statement acts as a space for experiencing duration—extended, slowed down, resonating. This kind of experience proposes conditions under which sound art embodies time, allowing time to be felt as something that happens within me. Sonar Presence proposes the function of an ontological laboratory of perception, in which the viewer becomes time in sounding, fading, tension, and anticipation.

In a traditional aesthetic approach, sound functions as a form of representation, a semantic and sign structure serving to convey content and depict the world. In the S.P. installation, sound does not fulfill a merely informational or illustrative function, because it becomes an event that touches, permeates, and co-constitutes the subject. Resonance operates through affective presence, engaging the body and consciousness in a direct, pre-reflective, and pre-semantic manner. This kind of approach to the function of sound art shifts it from the field of representational aesthetics towards processual and affective aesthetics, in accordance with current research on embodied perception and affective neurosciences. In Sonar Presence, the medium of sound fades away as a carrier of information. The sheet metal is not an instrument, the exciter (vibration transducer) is not the source of sound, the sound is not a product; everything becomes a single process. This kind of experience deconstructs the category of object-based aesthetics and raises questions about the boundaries of subjectivity in contemporary art.

The installation articulates how sound participates in the construction of meaning that is affective, uncertain, and deeply rooted in relationality. In a world dominated by the overproduction of images, data, and analyses, the work proposes a return to a primal relationship with duration, the body, and materiality, doing so in a way that is both radical and subtly transformative. Resonance operates on a corporeal, pre-cultural, and universal level. Within the installation, where sound is activated through movement and physical contact, a moment of synchronization emerges between gesture, touch, and attention. Being moved, awe, and intimacy require no justification. The work proposes the possibility of an experience that is not necessarily explained, yet profoundly meaningful. In a world that often strips individuals of their sense of meaning, art that resonates with the body can become a source for rediscovering continuity and subjectivity. One does not need a theory of resonance; one needs a space where they can feel that they are still embodied, that they have time, that something moves them, and that they do not need to explain it for it to hold meaning. The installation creates conditions under which the viewer can be more deeply present in the world and within themselves, on a path toward change, solace, and decision.

PROVISORIUM

NATIONAL MUSEUM IN SZCZECIN

The "Provisorium" exhibition, prepared on the occasion of the 80th anniversary of Polish Szczecin, is an interdisciplinary artistic and research project that attempts to tell the story of a city built from memory, displacement, and uncertainty. It is a reflection on Szczecin as a unique cultural space, shaped by one of the largest migration and settlement processes of the 20th century. The starting point is the concept of the provisorium as a permanent element of identity. This term, used by the city's first mayor, Piotr Zaremba, to describe the post-war reality, becomes today a symbol of profound social, cultural, and mental transformations.

The exhibition presents Szczecin as a laboratory of identity, a place where the fates of displaced persons from various regions of Poland, repatriates from the Eastern Borderlands, autochthons, and incoming populations collided. Their experiences, memory, and daily rituals have created a unique cultural mosaic, the traces of which are visible in the architecture, language, art, and soundscape of the city. In the spaces of the National Museum in Szczecin, works by artists connected with Szczecin are presented. Through site-specific audiovisual installations, musical compositions, synthetic soundscapes, textual forms, and spatial interventions, they engage in a dialogue with the memory of the place. These artists Bartłomiej Hajkiewicz, Andreas Menhard, Mark Lawlor, Krzysztof Kuźnicki, Katarzyna Zimnoch, and Paweł Kleszczewski, bring an external perspective and emphasize the relational character of Szczecin's identity.

The narrative is complemented by artifacts and historical documents provided by the National Museum in Szczecin, creating a material background for artistic reflection. Provisorium is also a voice in the debate on the marginalization of Szczecin a city long overlooked in the national narrative. The exhibition revisits the history of Szczecin and portrays the city as a dynamic field of cultural experiment, constantly redefining its place on the map of Polish culture.

NIBELUNGEN

NIBELUNGEN

"Nibelungen" is a solo exhibition by Bartłomiej Hajkiewicz, an experimental audial installation focusing on the experience of the temporal extension of resonance. It serves as a pretext for reflecting on the issues of memory and temporal perception. What is assumed here is the existence of a bond between the external world and the world of internal mental representations, the building block of a matrix, a framework that holds a formative significance for the development of time-processing capabilities.

At the moment of the onset of exposure to a stimulus, a switch opens, as a result of which streamed impulses reach an accumulator. After the exposure ends, the switch closes, and the accumulator finishes accumulating. The impulses counted and gathered in the accumulator are then introduced into working memory, and from there to a comparator, which compares the duration of the stimuli based on the number of impulses generated during their exposure. Nibelungen is a complex emotional process; it is a search for pieces of a shattered crystal, the one that remembered the reflection of the first image and sound. But later, it was shattered and lost forever. That is why alchemists, sorcerers, and artists have always been searching for even a fragment of this stone. The myth of the Nibelungs, especially their "tainted" gold, is present during the exhibition in several places. It is also on the gallery walls, where folds and shapes resembling patina-covered roofs have formed.

CONCEPT

The project consists of a set of large-format resonating objects made of brass, copper, and steel. The objects are equipped with audio exciters, magnetic transducers, devices that convert an electrical signal into vibration, turning metal surfaces into resonating objects. Some of the sheets feature interactive touch points brass spheres arranged in eight pairs. Touching two spheres simultaneously closes the electrical circuit and generates a sonic structure produced within the area of the sheet. The distribution of the touch areas forces participants into joint action, a physical connection through a tactile chain. The installation provokes co-presence, creating a situation of an intimate performance in which the relationship may be a condition for the emergence of sound. Complex soundscapes emerge from the metal resonators- original musical compositions, soundscapes, and sonic structures generated in real time using Pure Data environments, VCV Rack, analog sequencers, and modular synthesizers. Viewers react physically; they approach, touch, and embrace the resonating objects. This form of contact was present during the exhibition at the STAR Gallery in Szczecin. The installation functions both as a sound object and a performative stage activated by the viewer's presence and corporeal reaction.

The Nibelungen exhibition refers to Edmund Husserl's problem of the theory of the internal structure of time consciousness, according to which consciousness is not a linear sequence of point like "nows," but a structure of dynamic flow, in which every experience is constituted as a complex whole of three co-present moments: primal impression- that is, what is currently happening "now," the original sensation; retention- the trace of what has just happened, which still endures in consciousness as an outdated but present content; protention- the anticipation, the expectation of what may or should happen in a moment. These three elements mutually constitute experience as a living stream of consciousness. In Nibelungen, the Husserlian structure is translated into a material, physical, and audial language. The mechanism of tactile interfaces, which requires the physical cooperation of viewers expands the Husserlian structure beyond individual consciousness. In Nibelungen, temporality becomes interpersonal, the stream of consciousness stretches between bodies, and perception becomes a relationship.

The inspiration for the title and the narrative structure of the project is the Old Germanic myth of the Nibelungs, whose content centers around the idea of the cursed gold of the Rhine. The treasure, torn from nature, becomes a source of greed, betrayal, and catastrophe. The possession of the treasure brings power and influence; it becomes a hotbed of conflicts, obsession, and violence. The gold of the Nibelungs becomes a figure of ambivalence; it embodies power, greed, memory, and curse, desire and destruction. It cannot be possessed without consequences, because its presence shatters the order of the world. In Nibelungen, the myth is rewritten into the language of sound and interaction. The gold is present both in the color of the metals used (brass, copper) and in the light reflected by their surfaces. The entire space of the STAR Gallery, where the project was presented, was transformed into a "golden" environment seemingly precious, hypnotic, uncertain, impermanent, irritating.

As part of the events accompanying the Nibelungen exhibition at the STAR Gallery, a screening of the silent film Die Nibelungen directed by Fritz Lang (1924) took place, projected directly onto the resonating surfaces, which simultaneously emitted compositions performed by me live. The projection onto the metal objects changed their status from sound carriers to screens of light, and the whole became an audiovisual ritual in which myth, technology, and corporeality intertwined into a single experience. An additional, significant context of the exhibition was a symbolic situation visible from the gallery window, namely the brutal replacement of the copper roof of the monumental Gothic Archcathedral Basilica in Szczecin, covered with a beautiful, noble patina, with roof tiles of a lower aesthetic and cultural value. This act of value exchange was visible directly from the gallery window. The loss of beauty, the hasty replacement, and the degradation of material culture become the contemporary reverse of the myth of the tainted gold of the Nibelungs.

THE CIRCLE

XR Experience

THE CIRCLE XR

"The Circle XR" is an extended reality experience that transports the participant into the realities of the famous escape from a Soviet labor camp. The project is inspired by the memoirs of Sławomir Rawicz and Witold Gliński. The participant assumes the role of a fugitive traversing the landscapes of Siberia. In its visual layer, the project draws on the drawings of Wacław Sieroszewski, whose raw aesthetics become the foundation for creating the virtual environment. A key element of the project is the application of volumetric scanning technology, a depth camera which records the user's movements and transforms them in real time into a three-dimensional figure in the VR environment. The project utilizes ambisonic VR audio technology, which surrounds the participant with a full spatial soundscape. Sound plays a narrative and affective role, it dynamically reacts to the participant's movement, changing its structure depending on direction, speed, and position in space. In this way, the participant experiences a sonic environment in which a decision and a change of position become elements of the composition. The Circle XR project is an artistic and technological experiment combining the aesthetics of archival narratives with modern tools of immersion. It is also a reflection on corporeality, alienation, and survival, becoming a metaphor for an existential journey. The sound layer was constructed in the AmbiX format with head-tracking and 360° spherical rotation in mind. Rendering takes place in the Unity engine, utilizing native spatial audio components, Google Resonance Audio, Steam Audio, and 360 Spatial Workstation. The original material was created using various sound synthesis variants and compositional techniques.

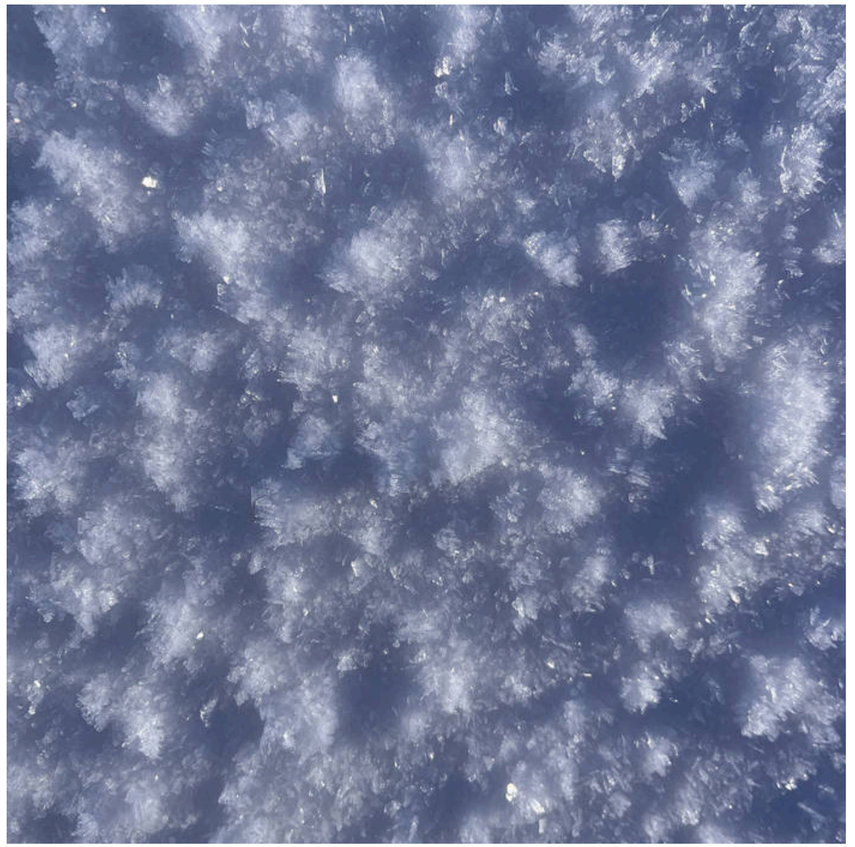
THE LONG WALK (THE CIRCLE XR)

This composition is a fragment of the ambisonic soundtrack created for The Circle XR, an extended reality experience inspired by the escape from Soviet labor camps. The piece unfolds as a soundscape, designed to react dynamically to movement and spatial orientation, guiding the participant through vast Siberian landscapes. Layered textures and evolving sonic structures reflect both the physical journey and the emotional intensity of survival, functioning simultaneously as narrative and environment.



JAWIĆ SIĘ / APPEARING

JAWIĆ SIĘ / APPEARING

WHAT IF EXPERIENCING A PERFORMANCE MEANT DANCING WITH YOUR EYES CLOSED?

JAWIĆ SIĘ / APPEARING is an immersive performance that employs theatrical technologies to create a sensory environment rather than a linear narrative. Conceived as a form of perceptual immersion, the work invites the audience to enter a continuously evolving landscape of light, sound, and movement, becoming an active element within its shifting visual and spatial composition. Instead of privileging narrative or a single sensory modality, the performance foregrounds embodied perception. Gradual transformations of light prepare the audience for the emergence of successive visual states, while the interplay of sound, colour, and spatial atmosphere encourages free association and sustained attention. The work invites participants to respond through movement, opening the possibility of an intimate, bodily relationship with the surrounding environment.
Drawing on the writings of Wiesna Mond-Kozłowska, the project approaches dance as a practice capable of engaging the unconscious and enabling "a moment of encounter with oneself, an experience of the unity of being and appearing."

JAWIĆ SIĘ / APPEARING draws on techno culture, the trance-based musical practices of pre-industrial societies, and narrative strategies developed within immersive art and extended reality (XR). It also references painterly approaches that dissolve composition into fields of colour, transforming the visual field into an immersive perceptual environment.

SOUND DIRECTION: BARTŁOMIEJ HAJKIEWICZ
LIGHTING DESIGN: MATEUSZ TYMURA
NARRATION: JOANNA ŻURAWSKA
MINDFULNESS TECHNIQUES: GRZEGORZ JABŁONOWSKI
VR DOCUMENTATION: MIŁOSZ HERMANOWICZ
PRODUCTION: UNIWERSYTET TERENOWY FOUNDATION
PRODUCTION: BIALYSTOK CULTURAL CENTRE

JAWIĆ SIĘ / APPEARING can be understood as an intimate form of technopoetry, enacted by the audience themselves. The work continues my artistic research into the role of the body and movement within performative environments, examining their potential as perceptual media for experiencing temporality and the passage of time.

The performance opens with a low, resonant voice that gradually guides the audience into a state of calm and sensory immersion. Attention is then directed towards bodily awareness as the light slowly recedes. As visual perception gives way to imagination, techno music emerges alongside spoken poetry exploring themes of corporeality. Movement develops from simple, grounded gestures into increasingly dynamic and unpredictable forms, inviting participants to experience dance as a contemplative and embodied practice.

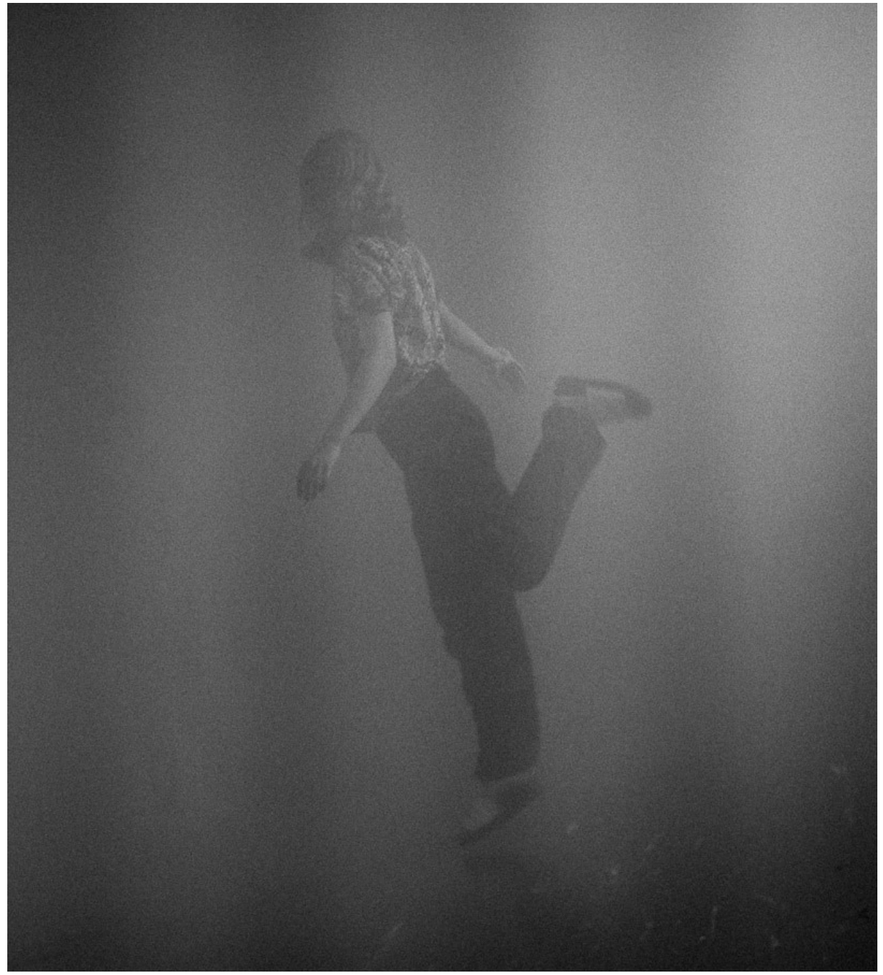
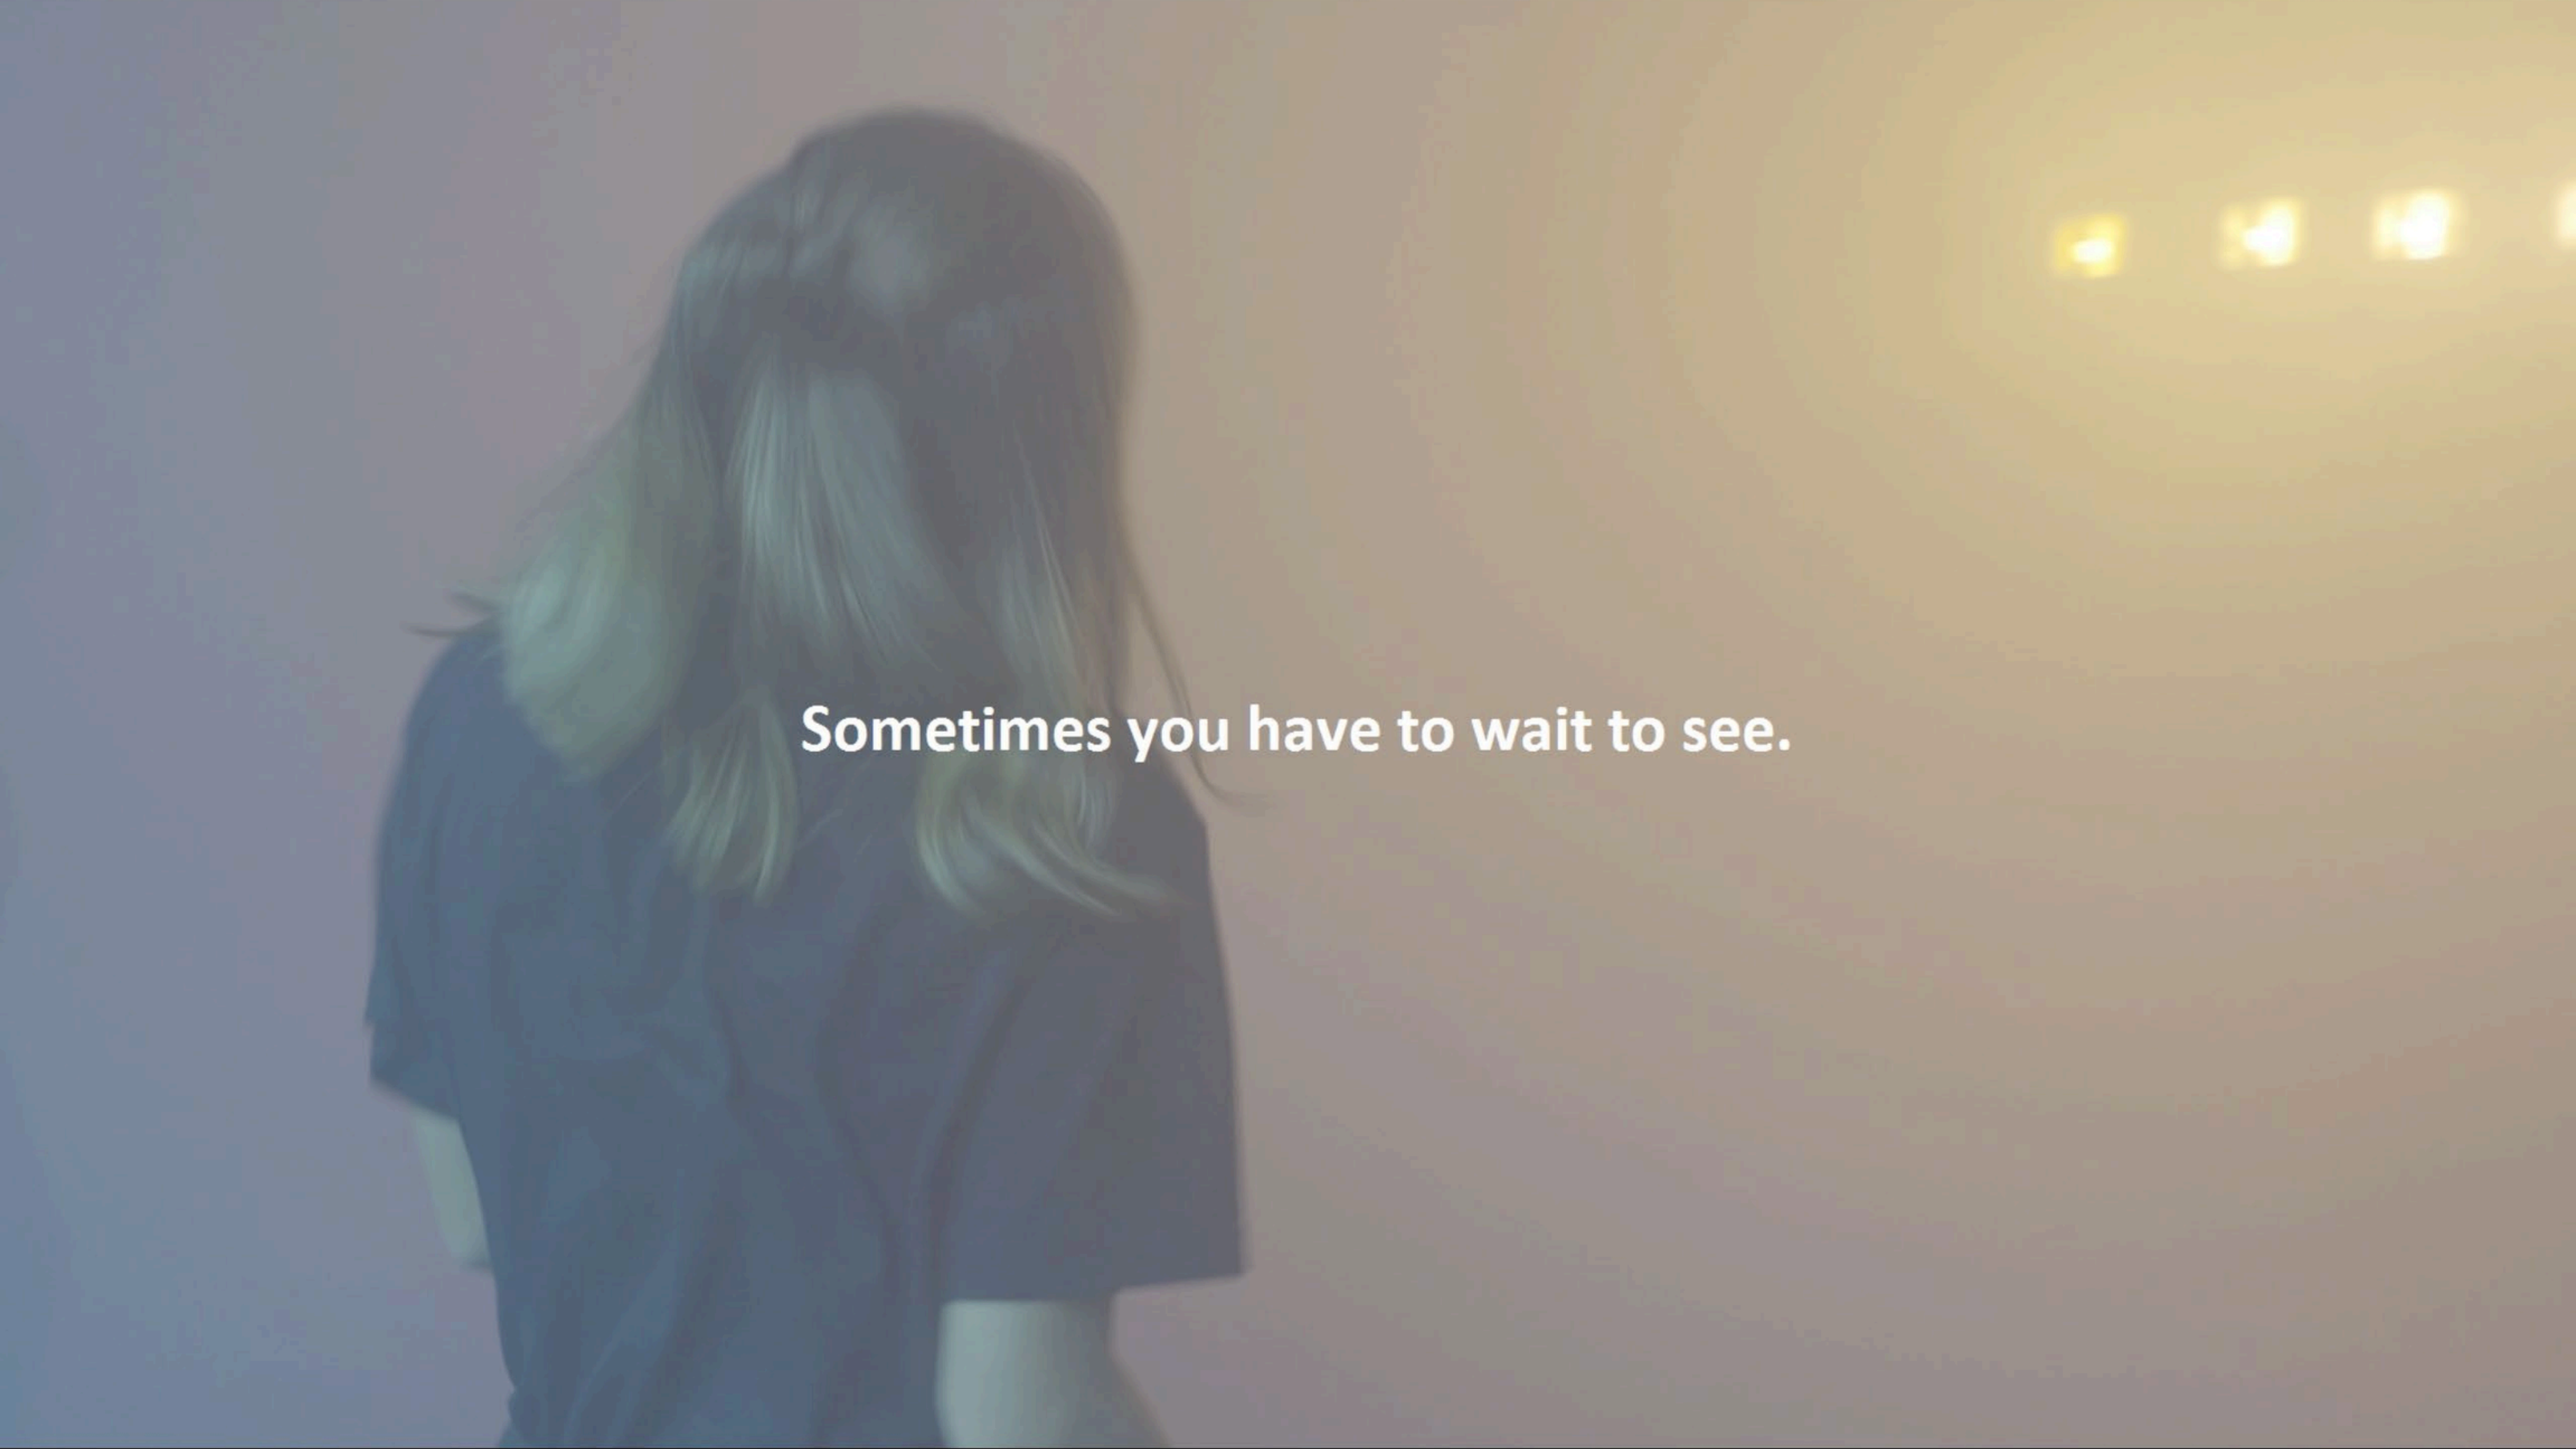
JAWIĆ SIĘ / APPEARING

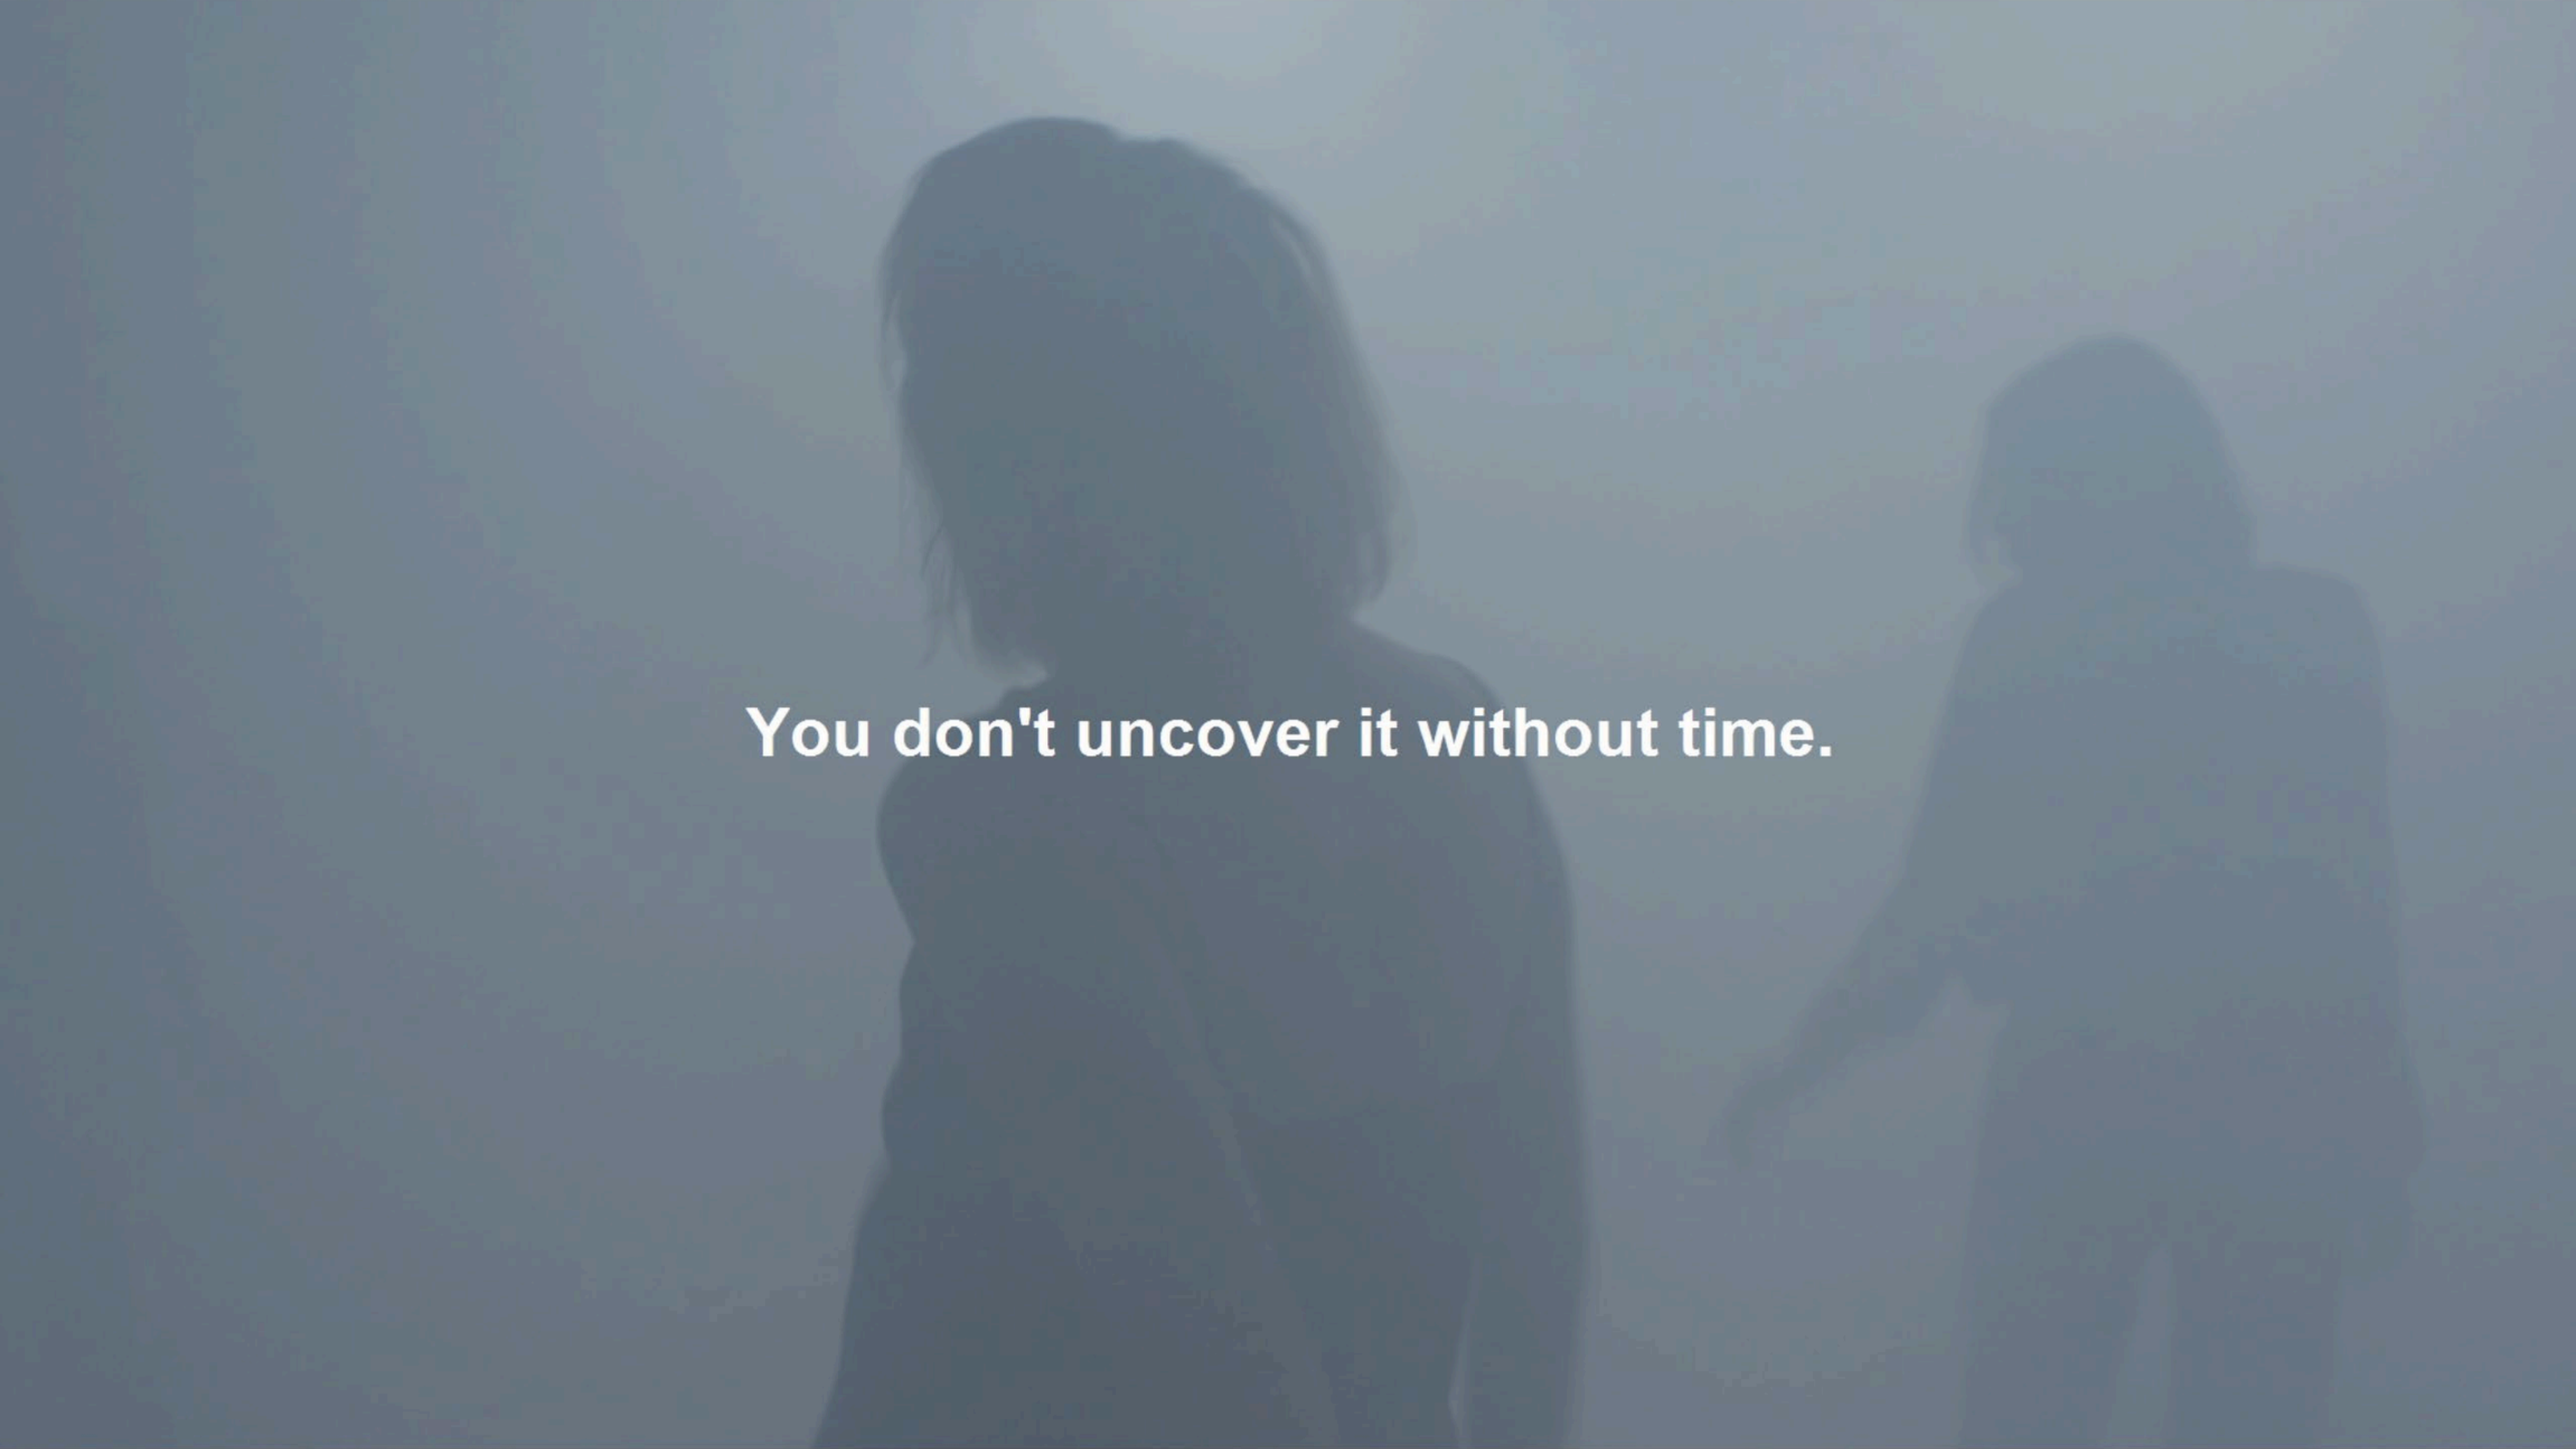
Original composition created as part of the performance JAWIĆ SIĘ / APPEARING



It takes some time to hear.

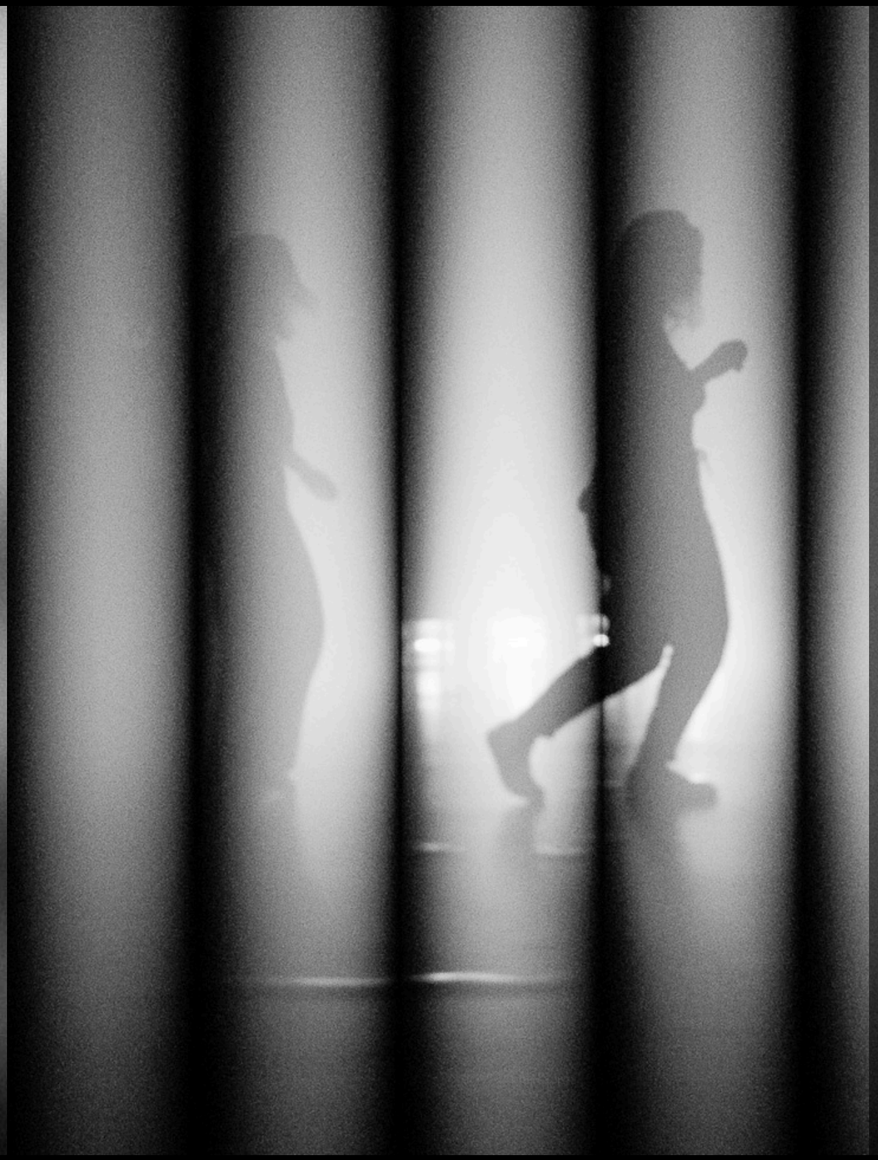


Sometimes you have to wait to see.



You don't uncover it without time.

That's why time can be so beautiful.



ZEKTOR AUDIO ART RESIDENCY

"Zektor" is an independent audio art residency initiative organized in the village of Żarnowo (West Pomerania). Situated in a post-German manor house with a unique history and architecture, the building which once served as a rectory has been adapted by artists as a site for creative interventions, experimentation, and collaborative artistic practice. It is currently being transformed into an artist residency center, with the process of its architectural and symbolic transformation functioning as an integral part of the project's identity.

As a co-creator of the residency and a member of the KONIK studio art collective, I am involved in curatorial and conceptual processes, as well as creative practices encompassing sound art, painting, installation, and spatial interventions. Zektor_01 and Zektor_02 residencies held to date have provided an opportunity for intensive artistic and architectural work, treating the manor itself as a living organism undergoing transformation. The activities included painting interventions, experiments with sound resonating within the building's structures, performances, documentation, and collective actions. ZEKTOR continues to evolve as a research and artistic space, destined to become a fully operational residency and creative hub in the future.

WISH YOU WERE HERE

VR offers the promise of being "inside," striving to create a sense of presence of being "there", offering the possibility to step into someone else’s life or even simulate being someone else. This is called "immersive storytelling." Yet, to what extent can we truly look through another person’s eyes, and above all, how much are we genuinely prepared to see and feel? How much empathy and readiness to co-experience do we actually possess?
In this experience, we meet Aneta, a 36-year-old woman diagnosed with breast cancer. From the window of her home, a walnut orchard is visible, slowly transforming into a new residential housing estate. Wish You Were Here is a classical documentary film that utilizes VR technology to let the viewer peek behind the scenes of the filmmaking process. It functions simultaneously as an anti-documentary and a disruption of VR's own conventions, actively stripping the spectator of the illusion of an intimate communion with the protagonist.

The concept of immersion in XR media suffers from semantic inflation and an ontological problem, rendering true immersive art effectively non-existent. Virtual reality's commercial promise relies on a false illusion of unmediated presence, which Wish You Were Here project actively deconstruct by exposing recording equipment to break the illusion of intimate communion. From a phenomenological perspective, genuine intersubjectivity requires maintaining ontological boundaries rather than simulating a fusional merging, much like how AI generates self-descriptive models without authentic inner experience. Ultimately, this radical rejection of absolute immersion is an ethical demystification of the medium, paving the way for a new aesthetics grounded in the honesty of mediation rather than manipulative illusion

MENHARD

„Jest nieskończona ilość wystaw, które czekają w kolejce na ich wystawienie, na ich artystę, odkrywcę, twórcę”. “Menhard” to film dokumentalny, przyglądający się obrazom szczecińskiego artysty, Andreasa Paula Menharda. To opowieść o sztuce abstrakcyjnej przez pryzmat malarstwa. Obserwujemy wystawy i działania artystyczne, rozprzestrzenione po całym Szczecinie, co przekłada się na próbę zdefiniowania współczesnej galerii sztuki. Premiera filmu “Menhard” odbyła się podczas 7. Międzynarodowego Festiwalu Filmowego Senior Movie 2024.

AJTIA

GRZYBY/MUSHROOMS; KŁOSY/EARS OF GRAIN; KAMIENIE/STONES; BOCIAN/THE STORK; NIEDŹWIEDŹ/THE BEAR are films comprising the humorous short animated series "Ajtia", based on Polish folktales. Capturing the comedic spirit of the 19th-century countryside, they tell stories that explain the origins and essence of things. The script is based on Polish aetiological tales recorded by ethnologists in the late 19th and early 20th centuries. Aetiological tales (aetia) represent one of the most original and captivating aspects of Polish folk culture; they are often highly humorous stories that explain the world, its creation, and its governing principles through "peasant common sense." The protagonists are familiar figures from the folk imagination, such as the old woman, the old man, the devil, the dog, St. Peter, or Judas. Ajtia have survived to the present day thanks to the work of prominent Polish ethnologists and folklorists, such as Oskar Kolberg and Julian Krzyżanowski.

ŚWIADEK

The theatrical performance The Witness is a story of transformation and the path to freedom, a dramatic struggle for one's own identity. Łukasz, born into a family of Jehovah's Witnesses, navigates a journey to his true self with fear, frustration, guilt, and disorientation, ultimately becoming Robert. Confronting his personal desires and his own sexuality, the protagonist makes definitive choices, abandoning the hermetic, oppressive world of the religious community. How does one remain true to oneself and consciously express one's identity in defiance of the forces that determine us?

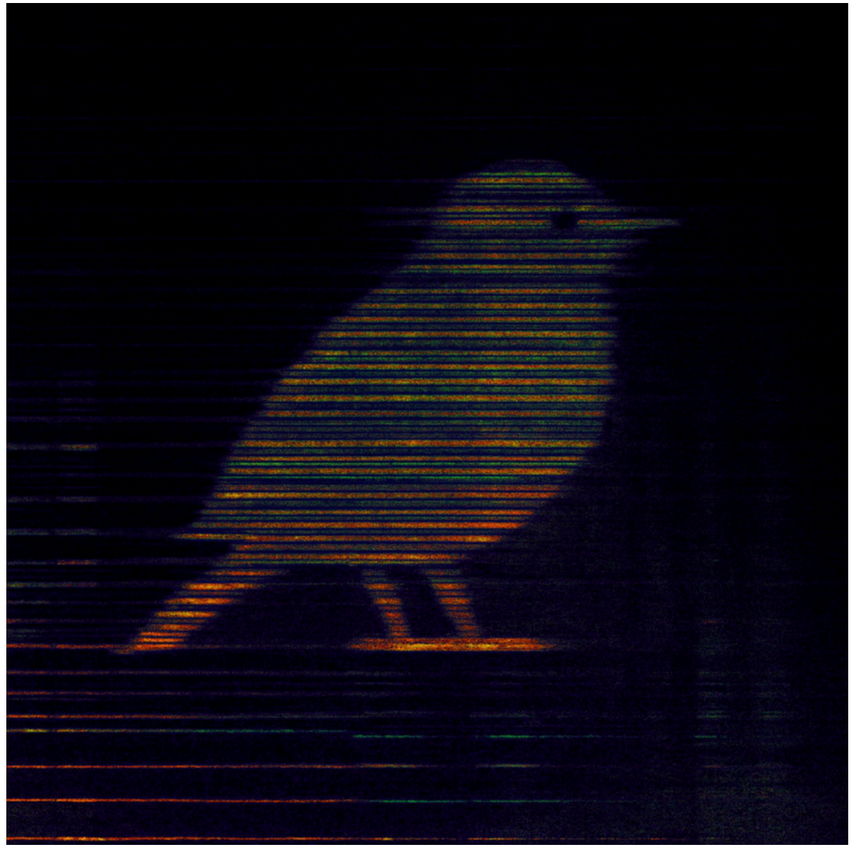
ŚWIADEK

Album of musical compositions (36'10'') — electronic, object-based music realized using analog techniques and modular synthesizers. The tracks constitute the musical score for the theatrical performance “The Witness / Świadek”, directed by Arkadiusz Buszko.

NEUROBIRD PROTOCOL

Electroacoustic piece realized using a modular synthesizer system, inspired by the structure of avian communication and the aesthetics of digital systems. The composition explores the intersection between biological impulse and machine rhythm, creating a dense network of sonic micro events with quasi-organic dynamics.



MORFEM 2/2

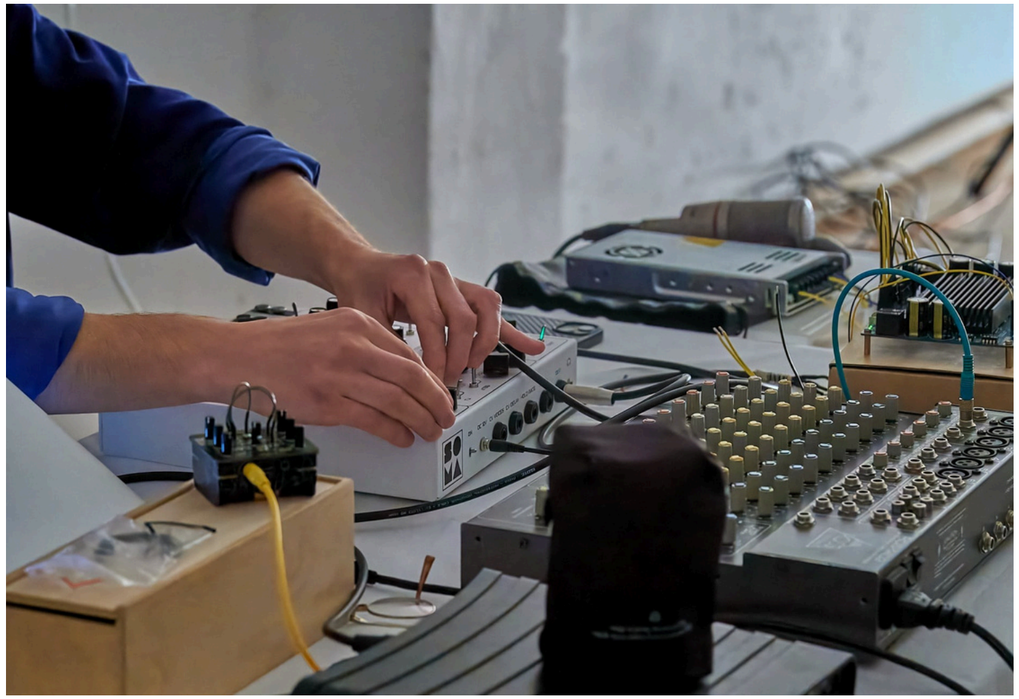
Live recorded composition (19'39") exploring modular synthesis and evolving synthetic soundscapes, inspired by the dynamics of insects and string orchestra textures.

REKONSTRUKCJA WYBRZEŻA / RECONSTRUCTION OF THE COAST

Musical composition (20'19'') — konkret music, realized using acoustic instruments and modular synthesis.

SONAR AWARENESS

Sonar Awareness – live recorded album (30').



COMPLEX OBJECTS

Album of object-based compositions (16'47''), experimental electronic music realized using modular synthesizers and granular processing.
